Although Photoshop does not come preinstalled on most computers, and you may not need to pay for a copy, we recommend that every graphic designer learn how to use this image manipulation program as part of their educational program. Images may be compiled from a digital camera, scanned from a document, printed from a scanner, or drawn on a graph paper grid. If a graphic designer is skilled at graphic arts, a computer is simply an accessory. However, for the home user, the computer functions as a tool for saving, organizing, and reprinting images. In this chapter, we provide a step-by-step tutorial to the Photoshop image manipulation program. We go through the basics of what you need to know to create great Photoshop graphics, as well as how to save, print, and manipulate an image before it's even created. Getting set up Before you can edit an image in Photoshop, you need to get an image on your computer. The tutorial in this chapter presents the steps to do just that: Take a picture. Import the image. Open the file. Choosing a photo No matter the equipment, a camera, scanner, or sketchbook with artwork, you're ready to start editing your image once you've collected the object. The steps in this section show you how to take the picture you need with the right camera settings. When you import the picture, whether from a film roll, a CD, or paper, a digital scan, or some other source, we recommend that you save this JPEG or TIF file as a file format that won't waste hard disk space, such as a GIF or BMP file. A GIF file can hold up to 256 colors and a BMP file is a raw bitmap image. Photographs (or other images) can also be transferred from a printer or computer to a disk. The file format used for an image from a scanner is usually TIFF. Setting up your camera If you're working with a digital camera, you need to consult your camera manual to determine the size of your picture: A standard format is 4 x 6 inches. Other formats are available, such as 5 x 7 inches and 3 x 5 inches. The standard format has a specific aspect ratio that equals to the display of your computer monitor. This setting is also known as the canvas size. If you take an image on a computer monitor, your setting

Hi, You are very right,I can see you are from Russia,Why to add your address in some special place when you are an international resident,at home in Moscow, Russia? You have to learn it, once you are learning working on English,and learn some Russian alphabet, you would see that the small Russian letters are easy to read,I'm going to try to learn the English alphabet after I finish my job. Hello there! I am Italian. I've never been a translator but, thanks to my husband, who knows English and French, I can translate movies (he works as a dubbing director). I enjoy translating films because you can play again them and get closer to the original. Because the path to make a translation is very complicated, I prefer to save them for a long time. If my translations are interesting enough I can send them to some TV or cinema channels. In case you can, be my friend on Facebook, onThe use of topical antimicrobials in the treatment of radiation-induced inflammatory skin lesions. To evaluate the efficacy of several topical antimicrobials in the treatment of radiation-induced inflammatory skin lesions. Six patients with dermatitis and ulcers from a previous neck or breast irradiation were treated with topical fusidic acid or topical mupirocin. Follow-up was performed, and reduction in lesion size was measured. The clinical effect, patient tolerance, and side effects were also recorded. Three patients (50%) experienced a partial or complete clinical response to fusidic acid. One patient had a mild sensation of local burning. There were no side effects, and no recurrences were seen. One patient (16.6%) showed a partial response to mupirocin. There were no side effects, but the lesions recurred in 2 (33.3%) of the patients. Fusidic acid and mupirocin are effective in the treatment of radiation-induced inflammatory skin lesions. Fusidic acid is well tolerated and effective with minimal side effects, but mupirocin is less efficacious and may have a higher level of side effects.It looks as if the end has come for Galymzhan Gunay-gunay, a complex troll who first appeared as a central figure in the Kremlin's disinformation campaign for the 2016 election. The parents of a missing girl have demanded answers after they say their 18-month-old baby's crib was examined for evidence following her disappearance. William and Katie Barrett say their daughter Mary Katherine was taken from her home on Tuesday, Oct. 2, in the 500 block of East 200th Street in Hialeah, Florida. The family also said they believe their child was being held against her will. The mother said the couple did not know who took their daughter, and they have no clue who may have taken the child from the home. "We had to move her crib and dump it," she said, adding that she believes Mary Katherine was kidnapped. "We can't sleep at night," she added, worrying constantly about her daughter. "Where is she? We don't know." The family says Mary Katherine was last seen alive Tuesday morning when she was walked out of the house by an unknown person. She also does not remember being abducted, the parents said. The family said they are working with police, offering a \$10,000 reward. They also said they have friends and family in the area who they believe would notice if the girl were missing. "We just want to know she's OK," the mother said. Police have not made any arrests, but the investigation is ongoing, according to Hialeah Police spokesman Jeff Atwater. "The family is very distraught," Atwater said. "They're being good about cooperating with the investigation." Police are asking anyone with information to contact Crime Stoppers at 1-888-780-TIPS (8477).
