A useful widget for your browser that displays weather details and forecasts in an unusual steampunk style. A 10-day forecast widget for users of Mozilla Thunderbird or Firefox to easily display weather forecasts in a form of a clock and alarm, together with temperature, weather condition, and the moon phase. It has an alarm widget for setting your desired time of day when the notification alarm sounds

on the displayed calendar. The alarm sounds only when the clock reaches the alarm time. This addon can be added to your Thunderbird or Firefox without using the Mozilla Thunderbird or Firefox addon manager. This addon is recommended for users who does not like other Thunderbird or Firefox widgets that have a circular shape. This addon has an alarm clock widget and display of the current weather conditions, so this addon is a Thunderbird Weather extension very suitable

for daily users. This addon is not animated. So if you want animated clock, please try with other clock widgets. The addon has a different animation and design each time you reload the addon, you can choose from the list of skin. Geekscape Lantern is a simple script which uses Lantern to generate a modern HTML5 clock widget. Features include: - A usable widget, no superfluous UI items - A non-animated animation for the background - An easy to change design, with a lot of

control over background, text and clock elements - Uses ImageLoader to avoid widget mangling by image slicing - A very lightweight add-on, only 51kb Windows: - Mac: - *Langauge Specific* jQuery / Javascript If you like Geekscape, please consider giving it a donation via PayPal on our website. - ie - Firefox - Opera Changelog for 0.3.0 *22nd July* - Changed to use jQuery instead of Mootools *21st July* - Control around the dark side of the moon, even after

the moon is covered, as well as the widget loading progress bar. *20th July* - Minor bugfixes. *19th July* - Few bugfixes *17th July* - Improved the firefox scrollbar snapping bugs *16th July* - Support for blackjack themed widgets *15th July

What's New in the Steampunk Weather Widget?

Steampunk Weather Widget is a small widget developed for the Yahoo! Widget Engine that has a steampunk appearance and shows

weather details, as the name implies. It is easy to install and configure. The interface of the application is unusual but very eye-caching. A frame that resembles a compass shows the weather forecast, including the wind speed and direction, humidity and temperature values. Hovering the mouse cursor over the frame reveals more thorough information, such as the pressure, temperature, humidity and last update time. Plenty of options can be configured from the Widget

Preferences area. Therefore, you can change the widget size and clock style, enable sound and animation control, as well as choose an advanced or standard tooltip display. In addition, you can modify the default language and pick the temperature measurement unit (Celsius or Fahrenheit). With the help of the settings provided by Yahoo! Weather Engine by default, you can also set the frame to stay on top or below all the other windows, to ignore mouse events

and to prevent dragging, as well as set its opacity to a preset value, ranging from 20% to 100%. Steampunk Weather Widget places little strain on the computer's overall performance, using a minimal amount of CPU and system memory. It has a good response time and works well, without causing the OS to hang, crash or show error notifications. Thanks to its intuitive layout and overall simplicity, first-time users can easily work with Steampunk Weather Widget. Steampunk

Weather Widget Comments Steampunk Weather Widget is a small widget developed for the Yahoo! Widget Engine that has a steampunk appearance and shows weather details, as the name implies. It is easy to install and configure. The interface of the application is unusual but very eye-caching. Category Description & Notes Minimum Supported Resolution Note Basic Notes This game is a simple, 2D top-down platformer. "Save/Load" is only available to save game data. If you plan on using in-game save points, you need a system which can handle continuous save/load (a lot of games can crash on save if the save isn't completed in the time required to load a large map).

There is no option to manually override save points. Game Library Support At the time of this writing, only current and last generation consoles are supported. You'll need a PS
