Most of the time, people associate xbox games with LIVE, but as we've seen many times, xbox has a lot of great games that can be played on PS4, but no option to do so. Some great examples of this include: • Joe Danger •• Mutant Mudds •• Castle Crashers •• Zack and Wiki •• Caveman •• LittleBigPlanet 2 •• Trials HD So we thought it'd be a cool idea to put together a list of some of the best and most popular games on the xbox that you can play on PS4 with no issues whatsoever. This includes games on both current gen consoles, as well as a few PS4 exclusives. Credits: @hybrid42 Edric Chrisjo Today, let's go back to the 90's. Two 90's era games that you should play if you haven't already is 'Zoo Keeper' and 'The Lion King'. Zoo Keeper isn't exactly an old game, but it just happened to be released on the GameBoyAdvance. The game was originaly released for the PC's, then brought to the GameBoyAdvance around

What's new in Starry Moon Island 2 Star Ocean MP08:

box ~Original Post~ I have for quite a while been writing some toy stuff in Clojure. There are a lot of really approaches to doing it, from deep, embedded DSL's to the simple/lightweight "libraries". As much as I use Clojure for real world applications, it still took me quite a bit of time to find the right balance of functionality, efficiency, and learnability. To start, these are the approaches I have used: Simple "arrays" with four or less entries, +ve and -ve lists. Maybe rich-maps for string-pairs, the

helper "primary-keys" and "cloning" facilities. Some basic parsing, searching and filter facilities (think select). Some of the usual bells and whistles for loading data-structure from a file (think JSON, YAML, HOCON...). Some functions to access a map by name, get a function that will perform any calculation, and a few other "common" utility functions (metronomes, ranges, randomizers, etc.) All of these could be considered heavy-metal. Personally, I prefer easier to learn, and useful libs, to open-source libs with too much complexity. There are some other issues with these libs as well, all centered on memory usage. These libs handle nearly every possible case, so memory used is usually proportional to the input, which can become a problem, when there's "unsafe" code in there, calling into unsafe code, etc.....even though, at face value, many of these libs are implemented in safe code, writing into the heap is still possible. So, generally speaking, there's really not much incentive for me to port them to Clojure, when the Clojure approach seems to give the same result with much less overhead, and the amount of code written. I still use a few, but they're ones that I figured out how to make it fast, given the input. Some Clojure libs that have particularly caught my attention in the past, that are still worth looking at: ranges: This is a really nice little Clojure lib for ranges, that will help make writing tricky code like "range-blocks" a little easier. The code is

The game is inspired by the well-known Board and Card Games, where each player is assigned a role and is given three counters to start the game. The player is then "free" to go wherever he/she would like. You can choose to play the game alone or in coop with your friends. You need to escape within 60 minutes! You can play with 3, 5, or 7 players. It's really up to you. But, beware! It will be a lot of fun! * Clue cards. * 12 rooms in total. * 6 events, where you need to solve puzzles and escape. * 26 endings! * 12 re-usable props (for the rooms). * Two boards, where you can keep track of your progress in case of a tie. * Alpha, Beta, and Omega: three secret-doorways to get into the Forbidden Room. * A secret mastermind that works with

you!1. Field of the Invention The present invention relates to a method and device for transmitting and receiving data using a wireless communication technology. More particularly, the present invention relates to a method and device for transmitting and receiving data using an Orthogonal Frequency Division Multiplexing (OFDM) scheme or a Single Carrier-Frequency Division Multiple Access (SC-FDMA) scheme in a wireless communication system. 2. Description of the Related Art Transmission of digital data, especially video data, in mobile communication systems has been conducted using a cellular system of Time Division Multiple Access (TDMA), Frequency Division Multiple Access (FDMA) or Code Division Multiple Access (CDMA). The CDMA is more advantageous than the TDMA and FDMA because it has a higher efficiency for using radio resources. Therefore, it is expected that the CDMA will be used in a next generation of mobile communication systems. In a next generation wireless communication system, Orthogonal Frequency Division Multiplexing (OFDM) and SC-FDMA have been considered for high-rate data transmission. A general design for the next generation wireless communication system supports a plurality of users and has a plurality of cell units, and therefore, a plurality of sub-carriers is used for each cell unit. However, if the number of users and the number of cells are not significantly increased, i.e., the number of sub-carriers used for each cell is reduced, the transmission efficiency is reduced. It is therefore desired that a method of assigning sub-carriers

Q: What does the string "ffff" represent in "GIT_SONAME"? I have seen no answer to this question. The file that is being used for the link points to a directory, not to a file. Any idea? I am using RVM to manage several Ruby installations and a self-compiled installation.

A: In a POSIX-only environment, the value is one greater than the number of files in the file system. In a BSD environment, it is zero.

In an environment that uses an extension-based version number system such as GNU m4, it is a sequence of hex digits representing the number of extensions. Documentation is here. There's no doubt that Ruben Amaro Jr. is going to have to make some hard decisions this offseason, but one choice in particular that the Phillies front office might be especially loath to make is outright trading John Lannan. That's because — this is the twist here — it's the only other starting pitcher on Amaro's team. To say Lannan struggled in his second full season in the big leagues is an understatement. (He also has a 3.00 ERA on the season, which isn't the greatest, and he did
