AutoCAD is available for use as a client application, or as a server application with support for over 30 platforms, including Windows and Mac. It is also available as a web application which can be viewed or edited remotely and is available on mobile devices. History AutoCAD was developed by Tad DeMeo, and was initially known as "Addition CADDing for Windows" until the end of 1982 when it was re-launched as AutoCAD. DeMeo was later replaced by Carl Bass who was then replaced by Rick Heide who in turn was replaced by Stephen Fleck who in turn was replaced by Lee Rayfield. AutoCAD was originally developed as an inexpensive CAD program to be used on microcomputers with internal graphics controllers. Microcomputers running on the 80286 and 80386 chipsets from Intel and AMD, respectively, had less powerful graphics hardware than those on mainframes or minicomputers. AutoCAD was the first CAD program of its kind to be specifically targeted for use on the new Intel and AMD microcomputer platforms. The original 1982 version of AutoCAD was known as the "AutoDraft" program. It was an Autodesk-produced, object-oriented graphical user interface that allowed one or more drawing "layers" to be created. Each layer has an individual style, line color, and other drawing parameters. Layers could be turned on and off or merged to create a compound drawing. The program also provided full support for blocks. Layers could be arranged in a flexible format and can be placed on a new layer. The program also provided features to help the user edit drawings, such as snap lines, dimensioning, and the ability to center objects. The first versions of AutoCAD were released on a Motorola 68000 microprocessor-based computer running the OS/8 operating system (for DOS). It was priced at US$1,995 (US$1,365 for academic institutions and other educational customers). AutoCAD for the 68000 was created by Carl Bass. The next version was released for the IBM PC in 1983 for US$2,000 (US$1,695 for educational institutions). It was the first successful graphics software for a personal computer that was targeted to the mainstream home user market. A new version was released for the Apple Macintosh in 1983 and was priced at US$1,495 (US$1,295 for educational institutions). The Macintosh version was created by
