

I tried to change the document to 4 pages but I am not succeeding. Can someone help me? A: As you just tried it yourself and the output was a reasonable 4 pages, I will assume the error lies in the input document or that you have a Postscript printer with a 4 page paper size. If this is the case you can use 2 different

printers for the inputs and the output - one printer to print to the 4 page size and another one to print the remaining 2 (1 for the 1 page input and 1 for the 2 page output). To do so you will have to change the input and output paper size to A4 and then the printer name (or make a new model). You can change the Printer when printing from the print-dialog of your program.

Additionally you need to change the Print command on the input sheet to `Print(B1:B4)` and on the output sheets to `Print(A1:A2,B1:B2,B1,B4)` The second 2nd parameter in the Print command sets how many pages you want to print, the third parameter will be the range (with a possible `\pagebreak` on the other end if you use this on a multi page input document) and

the fourth parameter is the area of the paper (in your case A4). Here is the code - you have to change the `\pagebreak` to your real one. As you used the 1-page input example PDF from the website I did not provide an output example, but you can do it in the same way: open

```
pdfName let sx = SelectionStart()  
let sy = SelectionEnd() PutIn("1")  
While (sy > 0) Print
```

(\$A\$1:\$A\$2,\$B\$1:\$B\$2,B1,B4) sy
= SelectionEnd() While (sy > 0)
GetFromSelection(\$A\$1,\$B\$1)
Print

(\$A\$1:\$A\$2,\$B\$1:\$B\$2,B1,B4) sy
= SelectionEnd() End While W
