It is where I spent the next 7 months. The resulting animation was broadcast on Italian RAI Channel 5, but few non-Italian speaking viewers saw it. .1. Field of the Invention The present invention relates to a stereoscopic image display device and a stereoscopic image display method. 2. Description of the Related Art A stereoscopic image display device has heretofore been known, which generates and displays a stereoscopic image (three-dimensional image) by stereoscopically viewing a two-dimensional image. Stereoscopic image display devices of a simple eyeglass type which a user wears on the eyes are available as well as a type employing a dedicated display device. In the eyeglass type stereoscopic image display device, the right and left images having parallax therebetween are displayed on the right and left sides of a display screen for stereoscopically viewing the right and left images, respectively. Examples of the stereoscopic image display device employing a dedicated display device include a type employing an LCD panel or the like, which has a display screen for displaying an image for stereoscopically viewing a two-dimensional image, and a type employing a hologram element, which generates a parallax image based on light from the front side and light from the back side, and displays the generated parallax image. A stereoscopic image display device having the above-mentioned configuration performs a conversion to an optical image of a parallax image on the basis of a two-dimensional image on an image display device such as an LCD panel or the like. In the process of the conversion, a parallax is generated and display is performed. According to the stereoscopic image display device having the above-mentioned configuration, however, an optical image of a parallax image is generally displayed on a display screen for the display of a two-dimensional image. In other words, according to the stereoscopic image display device having the above-mentioned configuration, three-dimensional image display such as a stereoscopic image display device cannot be attained in a case where the user views a two-dimensional image while keeping his/her eyes opened during a viewing time of the two-dimensional image, for example. Moreover, in a case where the user views the two-dimensional image while wearing a pair of glasses, for example, the frequency of use of the pair of glasses becomes high. As a result, a characteristic of the pair of glasses is changed or the pair 6d1f23a050
