Anyone know how to fix this? A: OK, I found the solution. I downloaded the latest version of everything I could find (some of it is old, but it works fine for now). Once I had those installed, I removed everything and installed Kepler 7 again. I do not know if I have to extract each version, but this is the list of things I have installed: Firmware table tahr wolder 67 Vag-com 409 dataables data tables wasax softwares library 1.9 It is working just fine. Firmware table tahr wolder 67 Vag-com 409 dataables data tables wasax softwares library 1.9 Q: Custom URL's using Express.js I am having a hard time getting my server to use a custom url on my express server. I am using express 3.2.3 and node 0.8.16. Edit I am trying to use this:

```
app.get('/checkout/', function (req, res, next) {
  res.sendFile(__dirname + '/checkout.html'); }); app.get('/checkout/onepage/', function (req, res,
  next) { res.sendFile(__dirname + '/checkout.html'); });
app.get('/checkout/onepage/checkout_form.html', function (req, res, next) { res.sendFile(__dirname
+ '/checkout_form.html'); }); app.get('/checkout/onepage/checkout_form/', function (req, res, next) {
res.sendFile(__dirname + '/checkout_form.html'); });
```

 Here is what I have for the application.js in case that information is needed:

```
// Dependencies
var express = require('express');
var app = express();
var mongoose = require('mongoose');
var passport = require('passport');
var multer = require('multer');
// Configuration
var port = 3000;
var db;
mongoose.connect('mongodb://localhost/test');
var db = mongoose.connection;
```
