KEYMACRO allows you to quickly fill out a form online. It is very easy to use, requiring only two steps to complete. You simply use the add/remove fields feature to create new fields. From there on, you simply input the value of each field and it is automatically saved in a database. From the database, you can then use the other features of the program. Creating a form online So, the first time you use this tool, you may need to first make a form. You do this by creating an event, with the number of fields you want to include being highlighted. You can use the various fields such as text, date, and date-time fields, or use the existing date-time field. Once you have set up the fields, you can then use the add and remove fields options to create them, after which you can use the program. KEYMACRO also makes it simple for you to remove the fields, allowing you to make changes to the form without

having to use any editing tools. Data logging and more Once you have made your form, you can then use the database to view it. The database can contain up to ten records, with each one being displayed in a table format. It can also be linked to an Excel sheet, allowing you to view the data in a spreadsheet format. The format is then imported to a MS Excel sheet. It also supports macros and autofill, and for an additional fee, it will allow you to send the data to the online form you have made. From there on, it will automatically update your form, ensuring that it is always up to date.

Pros • Quick and simple to use • Can be used to create a form and fill it up with a database of data • Comes with a database, making it easier for you to view • Easy to make changes to the form • Supports macros and autofill • Works with MS Excel

Cons • Only supports two forms at a time • Only support the English language
