In vitro studies demonstrated that purified sesamin inhibits the proliferation of both mouse and human T-lymphocytes stimulated by concanavalin A. In vivo, Sesamum was found to inhibit cell-mediated immune responses. Specifically, the administration of Sesamum into mice suppressed the proliferation of lymphocytes which was assayed using a lymphocyte transformation test. When Sesamum was administered orally to mice, it was mainly concentrated in the liver. These results may help explain the therapeutic efficacy of the seeds of Sesamum in the treatment of chronic hepatitis.
