To investigate the expression and significance of NF- κ B/p65 in immunohistochemistry of gastric carcinoma. The expression of NF- κ B/p65 was determined by immunohistochemistry in a gastric carcinoma tissue microarray constructed from 95 cases of gastric carcinoma and their paired peritumoral mucosa. There was positive expression of NF- κ B/p65 in 58.2% (54/95) of the tumor tissues and negative expression in 17.9% (17/95). The expression of NF- κ B/p65 was increased in 42.7% (41/95) of tumor tissues and decreased in 14.7% (14/95). In the tumor tissues with strong positive expression of NF- κ B/p65, the expression of Ki-67 was lower than that in the other groups (P
