Replace string with array values inside a text file I have a text file like this: Hi this is my line
Code: file1.txt I want to modify it and store in a new file. Suppose the values of the fields are arrays (for example: ["a","b","c"]). Then I want to replace each value with the field from an array. Finally I want to save it into another text file. I want to write the result into another text file. How can I do it? I've tried this:

```
import re file=open("file1.txt",'r') file.read()
```

file.close() with open('file.txt','w') as fout: for line in file: fout.write(line.replace(re.compile("[](\S*?)[]"), ["\[\$1 \]"]).strip()) It doesn't work.

And it doesn't return the file without the replaced values and it saves the fields instead of the values. This is the output I want: Hi this

is my line [a] [b] [c] A: import re
file=open("file1.txt","r") file.read() file.close()
with open("file.txt","w") as fout: for line in file
