This flexibility makes the multiplexing scheme very useful when screening biological and clinical samples with microarrays (see, e.g., multiplexed expression profiles of genomic hotspots \{[@pbio-0040305-b037]\}), where two or more "genomic signatures" need to be compared and quantified in a multiplexed manner. Some of the technical problems of multiplexing were partly overcome by Radojevic et al. \{[@pbio-0040305-b019]\}. c6a93da74d
