[Maltese (Gharib)] Fur-st 5: Shia'l-Gumwaq | خريدان جريب-يونان زموڤ شعله #Fur-st 5 رموف شعله Q: Using std::thread to execute OpenCV I am using opencv to start and stop camera in my camera app.Camera uses a c++ callback mechanism (So it will stop the processing while the camera is not connected, it will not continue processing when camera is connected). I am using a c++ thread and the threads functionality to start and stop camera.Everything works fine and camera starts and stops properly, except when i try to use cv::imwrite() function from OpenCV (i.e. i try to save video captured by camera to SD card), it works for a few frames but then fails, and the details shows me the following. This application has requested the Runtime to terminate it in an unusual way. Please contact the application's support team for more information. I have no clue why this is happening.Didn't even though it is an unusual way to end an application. I am new to C++ and OpenCV, can someone help me understand what is wrong? EDIT: My callback function is not longer needed.I uninstalled the previous version of app and now I am not using callback to connect/disconnect camera.For some reasons I think it is not working if i use callback to connect/disconnect, even though the camera is still working. EDIT2: I have created a project and attached the compiled project, it also fails.The same 'unusual way to end application' error is shown. A: There are some problems in your code. Please read below. You should keep track of last_time and start_time imwrite() function blocks your thread execution until it's finished(at least this is the case with OpenCV 2.4.9, and I'm not sure about new OpenCV version) The code with some changes may work better: struct callback_t { // time of the last recheck and start of the thread double last_time, start_time; int status; c6a93da74d
