Setting the system configuration to UEFI Dual Boot is required in order to write the Windows 10 EFI firmware to the desired disk. It is enough to install the Windows Setup and create the Windows Boot Menu. We must choose the disk where Windows 10 is installed. In the default installation, the Windows 10 installer creates a UEFI partition with the recommended size of at least 80 MiB. When the UCStools are installed, the internal disk is populated with the necessary details for the UCS installation and Windows setup. There are many preconfigured options, such as the preferred hardware configuration. The following procedure enables the UCS 4.X UEFI Dual Boot configuration. Boot the UCS 4.X UCS using the stand-alone installation (in contrast to the Intel and AMI) and save the installation media on a second disk. The saved installation media should be a full data DVD. The errors concerning the free disk space, when an installation of Windows 10 is performed without Windows Server 2016, are not expected any more. When an installation of Windows 10 is performed, the disk space is taken from the root of the installation volume. This does not leave enough disk space for the installation after the installation is done. The following error message will be displayed: Newport - Handsfree - Headset - Bluetooth - DECT (Digital Enhanced Cordless Telecommunication) 7.5mm - Womens - 2.5mm Audio Jack - Pair 2 - Standard USB >.1 - Direct - Charging - Apple - iPhone - Digital - Sound - EcoFlow 4 - Ear/Noise - Isolation - Level - Steady -
