The Arcade mode in Armageddon is based on Fatalities from Mortal Kombat II and in-game fatalities. Mortal Kombat: Armageddon's physics engine was enhanced. The game has several fatalities that are performed in various ways with arcade-style button presses. With the entrance of a few original characters, Mortal Kombat: Armageddon allows players to create a character of their own, or create a new character from the template, and the game will be ready for the player. Mortal Kombat: Armageddon has a two character limit, which differs from the limit of Mortal Kombat: Deception's five characters. Mortal Kombat: Armageddon's arcade mode, however, has only five characters at the maximum, like the single-player mode of Mortal Kombat: Deception. Mortal Kombat: Armageddon allows players to create a character of their own. Players can also create a new character from the template. If the player chooses a new character, he/she can name his/her character, as well as choose the starting stats for his/her character. Once the player has chosen his/her character, he/she will be ranked according to character strength. The arcade mode's obstacles include water, rocks, walls, and even a Black Hole. The game offers a character-specific fatality, or finisher for the player's character. Mortal Kombat: Armageddon also has knockback effects which the player can use to his/her advantage. Classic Arcade mode features four player mode, while Consecutive Bomb mode will allow players to play one of two characters fighting a CPU opponent. In the course of the game, players will be given the option to play in Mortal Kombat 3, Mortal Kombat 4, and Mortal Kombat: Deadly Alliance. Players can choose to play in a four-player game, as well as in a one-on-one game. 5ec8ef588b
