The idea is that you take a photo, process it, and then continue building on those layers, adding new ones, and then take another photo, process it, and add it in as well. Adobe has been working on making Photoshop layers more flexible and easier to use, and this is a big step in that direction. There's more info on a blog post from July about it.

Then you can print and share pages from the same file.
- The version in Photoshop CC, as well as the Creative Cloud extensions, are now based on a different underlying code base which is more stable and efficient, and we're ending the long

Photoshop development cycle.
