AI apps may provide smartphone function while drawing from knowledge of user interactions to provide a human-like experience. Such apps could test the phone's camera, infer information on a person's location, or even monitor a person's heart rate while they're taking a selfie. Photoshop will now automatically detect the colour space of all imported content, which can be helpful in a tight deadline. One of the most requested additions to Photoshop was to finally integrate brushes and filters more easily. App developers have long been trying to accomplish this, but Adobe says it's now there, and with Share for Review, letting your friends comment on a photo or illustration and share it on social networking sites is even simpler. **UPDATE:** In one of the demos, a character created in Photoshop Smudge tool with a digital paintbrush. all-new in-app search for recent documents, recents and main documents, which makes it easy to find your most recent edits and work on them—just like in a browser. With this discovery feature, you're now able to search for files, folders and web pages stored in your device and your library is always up-to-date, so you can keep working more easily. The Photoshop icon is designed to be iconic. This means that Photoshop's logo will stay the same, even as the application itself evolves. This provides continuity among all of the Photoshop product lines and ensures that a Photoshop workflow always works across the different desktop and mobile platforms. The other big new feature in this latest update is Clipping Masks. With Clipping Masks, you can make adjustments to different areas of the image. For example, if you want to adjust only a specific part of the image, you can create a Clipping Mask and make the changes only to that part of the image, without affecting any other part of the image. For the best results, do not use Clipping Masks with regular masks because they will not always behave as you expect. In addition to brand extensions in the form of a new logo, the new Photoshop will also include support for distribution on the Mac App Store and iPad. Given that the original Photoshop was launched in 1982, it is fitting that the next-generation version of Photoshop will continue to progress through great leaps forward in technology. Photoshop is a product we use every day. Since we started using Photoshop as a part of our workflow, we've almost always bought new versions. However, we have also used Photoshop on older versions for a while, like earlier versions of Elements, for example. So, while we'll miss Photoshop being available for Windows only, we're excited for the new version and think it's going to be a great time.
