Now it works fine. v1.5 - Added capability to activate directly from the context menu. v1.4.2 - Now copy keys by mouse. v1.4 - Fixed some bugs. Now copy keys. v1.3 - Now is copy keys. v1.2 - Fixed bugs. Now copy keys with option to add to hotlist. v1.1 - Added ability to add keys to hotlist. v1.0 - Now is copied keys.

He was caught smoking a cigarette in the back of a taxi in the City of London yesterday, according to a member of the public who alerted police. The taxi driver, who is believed to have recorded the footage on his mobile phone, will face no further action, a London Taxi driver has said. Ciaran O'Driscoll, who runs a Facebook page called 'The London Taxi Driver Unofficial', said: "The London Police has confirmed that the cabbie was not driving a taxi and that he will face no further action. "But, as it was a dangerous manoeuvre, the cabbie has agreed to sell the footage to the BBC. "He is so happy with the news that he's going to go to Buckingham Palace and meet the Prince of Wales." It is thought the cigarette was thrown out of the window of the taxi after being lit. The driver faces no further action because he was not driving the vehicle at the time the footage was taken. London Police have confirmed that the driver will face no further action. A spokesman for the Metropolitan Police said: "Officers in Southwark CID are investigating a report of a man smoking in a taxi which was being driven by a private hire vehicle driver at approximately 2.25pm yesterday (Wednesday). "The incident took place on the A200 at Putney Bridge. The taxi driver, who was not driving at the time, will not face any further action." The Met police said the footage of the cigarette could not be viewed as it was being kept for 2edc1e01e8

Indic IME [Updated]

Indic IME is a lightweight Firefox extension that is mainly intended for Indian users, allowing them to write texts within the browser in their native language, even if the PC's default configuration uses English. Providing support for 10 Indian writing systems, it can prove useful for writing emails, chatting with friends or posting messages on social websites. As a drawback, the addon has not received updates in a long time and it is not compatible with the latest versions of Firefox. However, it works like a charm on older versions, provided you have a proper font installed on the system (Open Type Unicode fonts for Indian languages). Once the extension is installed, you can configure it from within the 'Tools' menu. The initial step is to select the desired keyboard layout and you have two available alternatives here, namely WX and Inscript. The first one is a phonetic layout, which means that words are written as they are heard (mostly used by non-native speakers), whereas the latter is mostly used for typing in texts in Brahmic scripts or the Santali language. There are multiple Indian languages that you can choose from, namely Hindi, Bengali, Gurumukhi, Gujarati, Oriya, Tamil, Telugu, Kannada, Malayalam and Sinhala. Once these two options are configured, you can try typing in text in any web form or e-mail message creation box within the browser. Indic IME is a great tool for those who need to input text in an Indian language but want to avoid using inaccurate translation engines. It enables them to write in Indian without having to install a new language pack in Windows. Unfortunately, it does not provide an updated edition that can be used with recent Firefox versions, which might determine users to look for some other utility that can help them in this matter. ChIPER - Indic Keyboard Input Extension Description: ChIPER is an Indic Input Extension for Google Chrome and Mozilla Firefox. ChIPER translates the text typed in Hindi into Hindi using a Google Translate API. You can press the Spacebar to toggle between the native and Hindi. FreeLanguage Tools - IME (Input Method Editor) Description: FreeLanguage Tools, also known as FreeIME, is a free IME (Input Method Editor) for Windows. It is based on the open-source OpenIMP 1.5, which can be found here:
