Why not add yours?Q: Regex parsing and comparison I have the following Regex which is supposed to match a string of n digits, where n is variable, followed by a [space] followed by at least one character from the alphabet (let's call it A) then followed by n more digits. `"^(\d{1,3})[]+(A\d{1,3})+(\d{1,3})$"` This works in Ruby, but not in PHP. In PHP, I use the following: `if(preg_match('/^\d{1,3}[]+(A\d{1,3})+(\d{1,3})$/',$i))` But if \$i is an empty string, it doesn't pass. I think this is because of the ([]) characters, but I can't seem to get rid of them. How can I get PHP to work? A: Regex is quite limited as far as parsing is concerned. In PHP, you have to define what exactly you want to match, and then use appropriate functions to achieve what you want. Examples of functions used to match some regex: `preg_match preg_match_all preg_replace preg_quote` And if your regex is difficult, it might be good idea to try string functions: `strpos substr substr_count substr` In this case, if you know what you want to match, PHP will do what you want (or more) easily. The management of the patient with acute ureteric colic. Acute ureteric colic is an important cause of emergency hospital admission in both the community and in the hospital. Treatment includes fluids and analgesia, a trial of radiological insertion of a nephrostomy or ureteric catheter for double J catheter insertion or radiologically guided stone extraction (RGET), and surgical intervention, often performed in an emergency setting. The choice of treatment depends upon the clinical picture and the level of the obstruction. The criteria for treatment are reviewed, and the experience of treating 280 patients over a 5-year period is reported. Emergency surgery for acute ureteric colic is best reserved for patients with a completely obstructed ureter. With decreasing obstruction, the need for emergency surgery decreases; and the benefits of RGET are increasingly apparent, especially when undertaken by an endourologist. However, it is apparent that RGET is also indicated for patients presenting with a mild, resolving
