However, Photoshop is not the best tool for experienced designers, mobile users, or the general public.

Compatibility Notes: If you plan to share files over the Web, the older and lower quality formats such as JPEG and GIF tend to look better as they have fewer distracting artefacts. However, you may be limited to smaller file sizes with lossy formats. The quality and pixel density of the Web can be an important factor when considering file formats for Web versions of your work. If your site is going to see high traffic, ensure that you can use high image quality formats such as JPEG or GIF files. Other advanced photo editing features such as layer manipulation and graphics overlays are accessible even in smaller file sizes—and that makes good sense, since these principles and processes remain useful and applicable online.
