It is very easy to use because it can analyze the pixels of an image with a small number of clicks and then you just select the area to fill with a color. This is great if you want to use a different color on a background image or if you need to change the color of an image to make it easily editable. **What It Does:** Something we SAVE AS File is the ability to save a base image. Then you can change one or many pieces of the image without needing a separate file for each part of the image. This is a nice time saver if you have a large image and you only want to change a portion. **What It Does:** The Adjustment Layers can be used to help adjust one layer of your image relative to another. You can then duplicate the Adjustment Layer and create an offset layer to help position the layer. You can also create a Black & White layer, which helps you rapidly lighten or darken various areas of an image.

With more and more users adopt the new technology, these creative-friendly tools are predicted to grow. While any image editing is completed using the well-organized layers, there are many such layers, and the interface makes it easy for the users to access them with a simple click. San Jose, California - Nov.20, 2019 - Adobe today announced at Adobe MAX - the world's largest creativity conference - new innovations in Photoshop that make the world's most advanced image editing application even smarter, more collaborative and easier to use across surfaces. New for 2020, Share for Review - More than just editing features, Share for Review unifies collaboration with the work canvas in Photoshop. Typically, collaborators must leave Photoshop and open a separate browser window to view and share edits. Now, within Photoshop, users can share their UI with collaborators by attaching their UI to a Photoshop document - all without leaving Photoshop. Powered by Adobe Sensei Advanced AI and XMP (eXtensible Metadata Platform) tools, for 2020, the flagship Photoshop desktop app adds breakthrough features powered by Adobe Sensei. Adobe Sensei enables Photoshop editors to improve the accuracy and quality of enhancements offered by

Adobe Photoshop including Layer Comps, the state of an adjustment in real time, as well as new video improvements including an expanded collection of masking tools. Adobe Sensei is also now powered by the XMP Toolkit, allowing editors to use the powerful XMP specification to tag their images with metadata. It is optimized for Adobe's in-memory search technology with a new programming interface that makes deep searches easier to use, and makes lightening fast.
